

Tables: one per figure

Table 1: **2010 Characteristics by Tract Treatment Status** This table presents summary statistics for 2010 PRCS (ACS 2006–2010 5-year) tract characteristics — all pre-determined relative to Act 22 (January 2012) — separated by tracts that ever receive an identified decree-era investor purchase (treated) and tracts that never do. Column (7) reports the raw mean difference between treated and never-treated tracts and column (8) the difference after residualizing out municipio (county) fixed effects, with heteroskedasticity-robust p -values in parentheses. Dollar variables in 2010 dollars; shares in $[0,1]$. 2010 tracts are mapped to 2020 boundaries by largest land overlap, population-weighted. Statistical significance levels are indicated as follows: *** $p < 0.01$, ** $p < 0.05$, * $p < 0.10$.

	Treated Tracts			Never-Treated Tracts			Mean Diff.	Adj. Mean Diff.
	Mean	Std. Dev.	Observations	Mean	Std. Dev.	Observations	[(1) – (4)]	[(1) – (4)]

Table 2: **Tract-level treatment effects are robust to county-year shocks and baseline-trend controls**
This table reports pooled difference-in-differences estimates of the treatment indicator (1 from the tract's first identified decree-era purchase onward; never-treated tracts as controls) under three specifications per outcome: (1) tract and year fixed effects; (2) tract and county $\times$ year fixed effects; (3) adds ten standardized 2010 PRCS baseline characteristics (median household income, home value, and gross rent; poverty, BA+, renter, vacancy, seasonal-home, and mainland-born shares; log population) interacted with Post ($1\{\text{year} \geq 2020\}$, the boom era). Panel A: tract log price (Red Atlas, count-weighted annual mean, 2012–2024) and log mean purchase-borrower income (HMDA, 2012–2024), both scaled by 100 (OLS). Panel B: purchase origination counts by borrower ethnicity (Poisson; coefficients $\times 100 \approx$ percent effects, pseudo R-squared reported). Panel C: the ring design's event $\times$ ring cell panel (near ring $\times$ post-event indicator; cell fixed effects; the county and 2010 controls are the event's municipio and tract), for cell mean log price ($\times 100$) and the net Hispanic-to-non-Hispanic ownership conversion rate per classified sale (percentage points). Robust standard errors are clustered at the tract (Panels A–B) or cell (Panel C) level and reported in parentheses. Statistical significance levels are indicated as follows: *** $p < 0.01$, ** $p < 0.05$, * $p < 0.10$.

Table 16: **Wide-band decay with linear detrending, 2.5–3.5km control (figs. D5–D7)** LP-DiD pooled estimates; pre and post pooled coefficients are relative to the $t-1$ base. Post–pre is estimated in a single LP-DiD regression via pre-mean differencing (Dube, Girardi, Jordà and Taylor 2023): dependent variable $\frac{1}{4} \sum_{h=0}^3 y_{t+h} - \frac{1}{4} \sum_{\tau=t-4}^{t-1} y_{\tau}$ on treatment entry with calendar-time effects, clean-control sample; its SE, R^2 and Observations come from that regression. Coefficients are $100 \times \log$ points (shares in pp). SEs clustered by unit (cell/tract). Detrended post subtracts the per-bin linear pre-drift (fit through the base period) times the mean post horizon (2.5); its SE is the unadjusted pooled-post SE (trend treated as known). Statistical significance levels are indicated as follows: *** $p < 0.01$, ** $p < 0.05$, * $p < 0.10$.

1–4 purchases	+3.76* (2.12)	+5.37	+4.56	-1.61
5+ purchases	+18.31*** (2.88)	+7.45	+7.57	+10.86

Table 28: **Summary Statistics** This table presents summary statistics for the paper’s main samples. Panel A: market sales within 1km of an identified decree-era investor purchase (ring design estimation sample: gap ring, junk/nominal prices, and investor-parcel sales excluded; events 2012+); name-classification indicators are defined over sales whose parties’ surnames classify. Panel B: Red Atlas tract×year panel (transaction-count-weighted annual mean prices); identified purchases reported over the 235 treated tracts. Panel C: HMDA tract×year panel of originated first-lien owner-occupied 1–4 family purchases, 2012–2024. Panel D: 2010 PRCS tract characteristics (2020 boundaries, population-weighted).
